WHAT TO DO, STAGE BY STAGE

CRM 2.0 Compliance

Standard Operating Procedures

The agent runs the routine; you make the human calls. This is the simple reference for what you do at each stage of a compliance job — from landlord approval to close.

The model in one minute

Every request is a single compliance-certificate job — a Gas Safety Certificate (CP12), an EICR, an EPC, and so on. An AI **agent** runs the routine end to end: chasing, booking and reminding. **You**, the operator, step in for the decisions that need a human. Two review checkpoints are always yours: **Certificate review** and **Invoice review**.

Ground rules — every job

- **Read the whole job before acting.** The agent often suggests an action from the most recent message only; the wider history may point elsewhere.
- **Only action flagged jobs.** An orange flag means it has escalated and needs a human. Leave everything else with the agent.
- **Don't take over just to call early.** If there's no new urgent info, let the agent work — it will escalate when it needs you.
- **Call first, then email.** Calling is your primary way to progress a job. Always follow up with an email — including every time you leave a voicemail — so the recipient can find the right thread to reply to.
- **If you're not 100% sure, ask.** And surface bugs and edge cases early rather than pushing a job forward the wrong way.

WATCH OUT

Never share direct phone numbers between tenant, landlord and provider — we only pass on masked numbers.

The main path

Most jobs travel these stages, driven by the agent. The two **bold** stages are your checkpoints — the job stops and waits for you.

Stage	What happens
1 Landlord approval	Agent asks the landlord to authorise the work.
2 Provider selection	Agent finds a contractor.
3 Scheduling	Agent brokers a date between the parties.
4 Visit	Agent confirms and reminds the day before.
5 Result awaiting	Agent chases the certificate.
6 Certificate review ★	YOUR CHECKPOINT — check the document and its dates.
7 Invoice review ★	YOUR CHECKPOINT — the invoice is reviewed by hand before close.
8 Completed	Job done.

NOTE

Side flows branch off the main path: **Remedial works** (extra works found at Certificate review), **Landlord DIY** (landlord arranges it themselves), and a **Boiler service** that can ride along with a CP12.

SOP · Landlord approval

Every job starts here. You authorise the works once the landlord says yes. The buttons vary slightly by certificate type.

1. If the landlord approves **by phone**, click the approval button directly (e.g. **Approve, Use Default SP**) — **not** Add Direct Info.
2. If the landlord **names a specific provider**, click **Approve, Use Another Provider** (see the provider SOP below).
3. If the landlord wants to **arrange it themselves**, click **Landlord DIY** — the agent then waits for their certificate.
4. On a **CP12**, check whether the landlord wants a boiler service via **Approve, Add Boiler Service**. If their answer is unclear, ask again before proceeding.

DO THIS

Landlords often ask the price before authorising. Check the Service price cheat sheet (in this space), reply via **Send Communication**, then click the approval button.

WATCH OUT

Provide Instructions, **Reassign Job** and **Cancel Job** are admin-only. You'll still see the buttons, but consult an admin first.

If the landlord asks for a specific provider

1. Click **Approve, Use Another Provider**.
2. If they're not on the preferred list, check the provider panel at panel.dwelly.team/dw-admin/html/pm-providers.
3. They may be on an agency-specific onboarded list — if so, reach out to Dylan.
4. If they're on no list, ask the relevant PMs for feedback, then send the provider to Veronica to be onboarded properly (following the onboarding SOP).

SOP · Scheduling

The agent contacts the tenant and provider to find a matching slot, nudging whichever side is silent and escalating on a deadlock. When it lands with you:

- **Chase by phone first**, then send a confirming email.
- **Add Direct Info** — use it to pass on information you received from one party to the other. Write it **as if you are the party you got it from** (e.g. “11th August 2026 at 2pm”, not an internal note). Pick the right source (e.g. From Provider); attachments are supported.
- **Set Visit Date** — use it to record an appointment **both sides have already agreed**.

DO THIS

Rule of thumb: **Add Direct Info** = passing on information you received. **Set Visit Date** = recording an appointment both sides have agreed.

- Vague times the AI won't accept (“morning”): set the visit date manually — treat morning as 8am–12pm.
- Tenant reschedules out-of-band (emails us directly): it arrives as an escalation — just **Set Visit Date** to the agreed new slot.
- Two tenants: it's better to call the second tenant than the first tenant's second number (secondary numbers were copied across without notes).

SOP · Rescheduling

From **Visit** or **Result awaiting** you can reschedule without a manual take-over. Pick the action by whether a new time is already agreed.

Action	When to use it
Reset Visit Date	Both sides have ALREADY agreed the new time. Updates the booking and notifies both automatically.
Reschedule	No new time agreed yet. Choose tenant or provider and write the opening message so context carries over.

DO THIS

Dates you type into your message are recognised and used through the flow — a natural line like “next Monday works” is enough to move things along.

SOP · Certificate review ★ your checkpoint

Check on every certificate

1. **Address** — check it on the certificate and the paperwork generally (invoices, quotes). Landlords sometimes send a document for another property.
2. **Numbers** — subtotal, VAT and total.
3. **Dates** — issue and expiry present and accurate, in the right fields on both the certificate and the CRM.
4. **Provider name** — for a Dwelly provider, copy it from the Contacts tab; for a landlord-DIY cert, use the name on the certificate.

NOTE

If the AI **flags the address**, there's nothing to correct — it's just a hint to look (often triggered by a handwritten cert).

Landlord sends a cert for the wrong property

1. Upload the cert to the property it actually belongs to (CRM 1 → File Manager) — it's a valid document, don't waste it.
2. Request the correct cert for this job's property from the landlord.

Reading the two cert types

- **CP12 (gas)** — not labelled satisfactory / unsatisfactory; each appliance is categorised individually. Check the **Safe to use** column. All YES means no safety failure forcing a required remedial — but read the engineer's notes and judge each noted item (required vs optional) on its own merits.
- **EICR (electrical)** — carries an overall Satisfactory / Unsatisfactory. Codes **C1, C2 and FI mean work is required**; **C3** is advisory only. An EICR with only C3s (or none) is satisfactory.

WATCH OUT

FI (further investigation) is a fail code, just like C1 and C2. If an EICR lists any FI items it is unsatisfactory — send it down the required-remedial path, whatever the summary box says.

NOTE

Invalid — use when you spot an issue with a cert (wrong date, address). **Upload another** — use when a new cert arrived that the agent didn't recognise automatically.

SOP · Remedial works — required vs optional

At Certificate review you decide whether remedial works are **required for compliance** or simply **recommended**. That choice sets the job's path.

- **Required:** click **Need required remedial** and continue the remedial flow as usual.
- **Optional / recommended** (a satisfactory cert with C3 items): review the cert as usual, then click **Optional remedial**.

NOTE

Expected, not a bug: confirming C3s on a satisfactory cert automatically creates a maintenance job in CRM 1.0 — the optional-remedial workflow lives in 1.0. Accept C3-only certs as satisfactory.

The remedial branch (once you press Need remedial)

Stage	What happens

Quotation awaiting	Agent asks the provider for a quote.
Quotation review ★	YOUR CHECKPOINT — check the amount and the work description.
Landlord quote approval	Landlord agrees to pay. Usually nothing to do.
Then	Approved → back to Scheduling for the repeat visit. Rejected → Remedial terminated (the satisfactory cert still stands).

DO THIS

If the landlord rejects the quote, call to confirm whether they'll get their own quote or want other agency contractors. Their own contractor must be vetted first; if they decline entirely, assert full landlord DIY.

SOP · Invoice review ★ your checkpoint

- Every job with an invoice stops here — it must be reviewed by hand before the job can close.
- Check the **subtotal, VAT and total add up**, and the **reference** is right.
- Collect the certificate **and** the invoice for every appointment.

SOP · EPC — not mandatory mid-tenancy

Unlike an EICR or gas cert, an EPC does not have to be renewed during a live tenancy. It must be valid before you market the property, sign a new agreement with different tenants, formally change the tenancy agreement, or serve notice — so renewing is best practice.

WATCH OUT

Exception — **selective licensing**: some properties must hold a valid EPC at all times. If a property is under selective licensing, treat the EPC as required and keep it in date.

DO THIS

Wording when the landlord hasn't responded: “As we have not heard from you regarding the renewal of the EPC, we will not be going ahead with renewing this, as it is not a legal requirement to have one during a tenancy. Please be aware you must have a valid EPC before you market the property, sign a new agreement with different tenants, or change the formal tenancy agreement; if you serve notice you would also need a valid EPC — so it would be best practice to renew it. If you'd like this renewed in future, please come back and confirm we can arrange it.”

SOP · Escalations & timing

The date at the bottom of a job is the **next agent action** — not necessarily the next escalation (it may be an auto reminder). The full list of planned actions sits on the right of the job. If the next action is an escalation you can action it early; if it's a reminder, leave it.

How long the agent chases before it escalates

Stage	Reminders	Then
Landlord approval	+1 & +3 days	+4 days: auto-advance to provider selection
Provider selection	Instant	Escalates only if no contractor is found
Scheduling	Nudges the silent side	Escalates on a deadlock
Visit	One reminder day before	Auto-advances once the date passes
Result awaiting	+1 & +2 days	+3 days: escalates to you
Invoice / Quotation awaiting	+1 day	+3 days: escalates to you
Landlord quote approval	+3 days	+7 days: escalates (money decision)
Landlord DIY	+10 days	+14 days: escalates (landlord is doing it)

NOTE

“Wait for response” caps at **3 days**. If a provider is away longer (e.g. annual leave), set the 3 days and extend again when the job returns to your queue.

Common escalation triggers — what to do

Trigger	What to do
Vague / low-confidence reply	Call the party and clarify before choosing the next step.
Unrecognised intent	Read the whole job log, call to clarify, then choose the stage.
Job answered + unrelated question	Action the job, then pass the extra question to the relevant PM.
Party silent, reminders exhausted	Follow up by phone, then a confirming email.
Sensitive ask (tenant data / named contractor)	Don't share or commit without checking. If unsure, ask.
Landlord hints DIY / changes mind	Route to Landlord DIY; if unclear, call to confirm first.
No contractor / landlord named one	Source a contractor, or record the one the landlord named.
Contractor declined / won't attend	Reschedule or Change SP.
Document unreadable / wrong type	Check the file, request a correct copy (a “document problem” escalation).
External-system error	Retry if transient; escalate to support if it persists.

SOP · Working across 2.0 and 1.0, and good habits

Switching a job from CRM 2.0 to CRM 1.0

1. Ask the ops team to pause auto-transfer for the agency.
2. Cancel the request in CRM 2.0.
3. Create the request in CRM 1.0, leaving full context on why it was moved.
4. Ask the ops team to switch auto-transfer back on for the agency.

Vacant (unattended) properties

Fully supported and flagged **Unattended**. With no tenant, the agent goes straight to the provider, explains keys are collected from the agency, and books from provider availability. The day before the visit you get an escalation to verify the keys are available for collection.

Good habits

- Before requesting a document from a provider, check the last few emails on the job — often it's already there.
- If a document arrives out-of-band (e.g. Slack), don't take over to upload it — use **Add Direct Info**, source **From Provider**, and attach the file.
- Collect the certificate AND the invoice for every appointment.
- Use the **Job Notes** tab for operational context (why we're waiting, special agreements) — not communication history.
- Don't rely on the AI summary alone — always read the job chronology first.

NOTE

Resources: the full **SOP guide** (password-protected — ask an admin), the **Service price cheat sheet**, and the **SOP widget (beta)** that serves stage-relevant SOPs inside the job page. Use the automated solution before manually sending emails.
