Building the Training System with Claude AI

A practical implementation plan for using Claude Pro to design, build and run Dwelly's internal training portal

4	12	Claude Pro	30+
Build Phases	Months	Powered by	Users Served

How Claude Pro powers the build

Claude is not just a chatbot — it is the engine behind the entire system

Content Creator

Write every training module, guide, SOP, and knowledge article for the portal. Claude drafts, you review and approve.

Dobby Brain

Claude provides the intelligence behind Dobby. Feed it your SOPs and it answers team questions accurately, every time.

Assessment Builder

Generate quizzes, pass/fail criteria and competency questions for each module — instantly and at scale.

Video Script Writer

Every video guide starts as a Claude-written script. Record once using the script. Consistent, clear, professional.

Process Designer

Map workflows, onboarding pathways and checklists using Claude as your systems architect.

Progress Analyst

Use Claude to interpret completion data and identify knowledge gaps — then suggest targeted refresher content.

Designing the portal with Claude

Use Claude Pro to architect, structure and populate the training system from scratch

01 **Define the structure**

Claude prompt →

"Act as a learning systems designer. Create a full training portal structure for a UK property management company with 30+ staff. Include sections for: onboarding, maintenance, compliance, knowledge base and system how-to guides. Format as a hierarchy."

Output: Full portal sitemap ready to hand to a developer or use in Notion/internal tool

02 **Write the content**

Claude prompt →

"Write a 400-word training module on [topic] for a property manager. Include: overview, step-by-step guidance, what to do if something goes wrong, and a 5-question quiz with answer key."

Output: Every module written to a consistent standard — just swap the topic

03 **Build the checklists**

Claude prompt →

"Create a pre-onboarding checklist for a new property manager at a UK lettings agency. Draw from ARLA standards. Include Rightmove Plus, compliance, and system training prerequisites."

Output: Gatekeeping checklist built and ready for use as a portal prerequisite

TIP: Save your best prompts as a Prompt Library in Claude Pro — reuse them every time you add a new module

Configuring Dobby with Claude

Claude becomes the intelligence layer — feed it your knowledge base and it powers Dobby's answers

HOW IT WORKS

1 **Upload your SOPs**

Paste your process documents, guides and portal content directly into Claude Pro as context

2 **Set Dobby's system prompt**

Use Claude to write Dobby's base instructions: tone, scope, how to answer, when to escalate to a manager

3 **Link video answers**

Instruct Dobby: "Always include the relevant portal video link when answering a how-to question"

4 **Test and refine**

Run 20 real team questions through Dobby — use Claude to improve the system prompt based on gaps

EXAMPLE DOBBY SYSTEM PROMPT

You are Dobby, the internal assistant for Dwelly property managers.

Answer questions about Dwelly's systems, processes and property management. Always be concise, accurate and helpful.

When answering a how-to question, always include the relevant video guide link from the portal.

If you are unsure of an answer, say so and direct the person to Walt or Natasha for support.

Do not make up information. Only answer based on what you have been given.

Creating video scripts & module content

Claude writes every script. You record it once. The portal houses it forever.

THE CONTENT WORKFLOW

1. **Identify topic**
   List every task a PM needs to know — from logging a repair to end of tenancy process
2. **Prompt Claude**
   Use: "Write a 2-minute video script on [topic] for a Dwelly property manager. Keep it conversational. Include key steps and what to watch out for."
3. **Record the video**
   Read the Claude-written script to camera or use screen recording — simple, quick, consistent
4. **Upload to portal**
   Embed video into the module alongside the written version of the same guide
5. **Add assessment**
   Prompt Claude: "Write 5 quiz questions on [topic] with one correct answer each and a rationale."

SAMPLE MODULE LIST (CLAUDE-GENERATED)

Section	Module	Video
Onboarding	Welcome to Dwelly & your portal	3 min
Onboarding	How to use Rightmove Plus	5 min
Maintenance	Logging a repair request	4 min
Maintenance	Contractor management	4 min
Compliance	Gas safety & certification process	6 min
Compliance	Deposit protection rules	5 min
System	End of tenancy process in Dwelly	7 min
Knowledge	Property manager FAQs (Dobby-linked)	Always-on

Your Claude prompt library

Save these prompts. Use them every time. Consistent inputs = consistent quality.

Content **Write a training module**

You are a training content writer for a UK property management company. Write a structured training module on [TOPIC] for a property manager. Include: purpose, step-by-step instructions, common errors to avoid, and a 5-question multiple choice quiz. Output in clear sections.

Video **Write a video script**

Write a clear, conversational 2-minute video script on [TOPIC] for a Dwelly property manager. Use simple language. Structure: intro, 3–4 key points, closing summary. Avoid jargon.

Dobby **Improve Dobby's answer**

Here is a question a team member asked Dobby: [QUESTION]. Here is Dobby's answer: [ANSWER]. Improve the answer so it is more accurate, clearer and includes a prompt to watch the related video guide.

Analysis **Identify knowledge gaps**

Here are the quiz scores from our last training round: [DATA]. Identify the top 3 areas where team members are underperforming. Suggest which modules should be refreshed and why.

Checklist **Create a checklist**

Create a 15-point onboarding checklist for a new property manager starting at a UK lettings agency. Include compliance, system training, Rightmove Plus, and shadowing milestones. Format as a tick list.

Refresh **Update a module after a system change**

The Dwelly system has changed the way [PROCESS] works. Here is the old process: [TEXT]. Here is what is different now: [CHANGE]. Rewrite the training module to reflect the update, keeping the same format.

Save all prompts in a shared Notion page or Claude Project — label with [TOPIC], [DATA] etc. so anyone on the team can use them

Monitoring & optimising with Claude

Close the loop — use Claude to review data, refresh content and keep the system sharp

Monthly gap analysis

Monthly

Export quiz scores and module completion rates. Paste into Claude with the prompt: "Identify the 3 weakest areas and recommend what content to update."

Content refresh trigger

On change

When Dwelly's system changes, paste the change notes into Claude: "Update this training module to reflect the following system change. Keep the same format and tone."

Dobby audit

Quarterly

Every quarter, run 20 real questions through Dobby. Where answers are weak, use Claude to rewrite the system prompt or update the underlying knowledge document.

New starter benchmarking

Per cohort

After each cohort completes onboarding, use Claude to compare their assessment scores against previous cohorts and identify if the programme is improving.

12-month implementation at a glance

What to build, when — and what Claude does at each stage

Month	Phase	What you do	Claude does
M1	Foundation	Define portal structure with Claude. Map all training topics. Write first 10 modules.	**Structure + content generation**
M2	Foundation	Complete Dobby system prompt. Set up knowledge base. Test with real questions.	**Dobby config + QA**
M3	Foundation	Record first video batch using Claude scripts. Upload to portal. Build checklist gates.	**Video scripting**
M4	Onboarding	First cohort starts. Run assessments. Monitor Dobby. Fix gaps identified.	**Assessment review + gap ID**
M5–6	Onboarding	30+ team members through pathway. Capture baseline scores.	**Cohort benchmarking**
M7–9	Embedding	All modules live. Progress tracking active. Dobby handling real queries.	**Content refresh + Dobby audit**
M10–12	Optimise	Monthly gap analysis. Update content. Year 2 plan drafted.	**Ongoing analysis + planning**

What you need to build this

The full tools stack — most of which Dwelly already has or has access to

AI | Available now

Claude Pro

Content writing, Dobby config, assessments, scripts, gap analysis

KNOWLEDGE | Available now

Claude Projects

Store your Prompt Library and portal documents so Claude always has context

VIDEO | Low cost

Loom or Screen Recorder

Record module videos using Claude-written scripts — simple, fast, low cost

PORTAL | To build

Notion / Internal Tool

House the portal pages, training modules and video embeds in Dwelly's format

ASSESSMENT | Low cost

AI ASSISTANT | Partially live

D W E L L Y

Where to start this week

1 **Open Claude Pro**

Start a new Project called 'Dwelly Training System' — paste your company overview and existing SOPs as context

2 **Generate your portal structure**

Use the prompt: "Act as a learning systems designer. Create a full training portal structure for a UK property management company with 30+ staff..."

3 **Write your first 3 modules**

Pick the 3 most common areas where new PMs need support. Use the module prompt. Review and publish to your internal tool.

4 **Complete the Dobby system prompt**

Use Claude to draft Dobby's instructions. Test with 10 real questions. Iterate until responses are accurate and helpful.

5 **Book a monthly review**

Set a recurring session with Walt and Natasha to review portal progress, Dobby performance and completion rates

Built with Claude. Built for Dwelly.
